of price and features in a
coin operated payphone.

Self-tariffing operation

**Pay-on-Answer operation
with refund**

PABX compatible

Coin learning mode

**Plug-In-Customiser for
enhancement and
programming**

**Metal cased version
available**

Key Features

Metering Options

Calls charging options include full meterpulse operation, or self-tariffing, with call start determined by "Press on Answer" button, first meter pulse detection or line polarity reversal.

Coin Mechanism

Coins are inserted without force into the mechanism, which has the capability of learning future coin changes. A bulk escrow provides prepayment coin storage, and subsequent cashing or refund of coins.

Reduced Cost Routing

The self-tariffing version can automatically route calls via alternative networks to reduce costs for the owner, using up to four digits as an access prefix.

Users will continue to be charged at the programmed rate.

Cash Records

Insert and turn the owner key and the Solitaire 8000 automatically displays the current cashbox contents and then the total cash takings.

The cashbox current total resets on opening the cashbox.

The accumulated total is held in non-volatile memory.

Solitaire 6000
