

GN 2100 IP and GN 2100 for desk phone telephony

Ultralight design. Unsurpassed quality.

The GN 2100 IP and GN 2100 are part of our award-winning headset series for business and contact centre professionals using traditional desk telephony. In fact, many users say that its excellent sound quality gives them the feeling they're having a "face to face" conversation. Moreover, the headset's sleek profile and lightweight, ergonomic design provide a unique combination of style and comfort.

- Award-winning, lightweight headset design
- Wide range of accessories for individual optimisation
- Excellent sound quality (80-15,000 Hz with GN 2100 IP)
- Choice of boom arms and microphones for optimum voice quality even in very noisy environments

The GN 2100 Series offer a choice of two patented boom-arm designs and noise-cancelling microphone so the headset matches the acoustic properties of even noisy office environments. The GN 2100 Series also features our PeakStop™ technology, which protects users from harmful sound spikes and other loud noises over 118 dB SPL (RMS).

The attractive 3-in-1 design of all our single-earpiece headsets lets users choose the most comfortable wearing style – our popular lightweight headband, our adjustable FlexLoop, or our SureFit earhook. Mix-and-match accessories make it possible to choose between three different ear plates and ear cushions.

For the ultimate in Hi-Fi stereo sound, the GN 2100 Series is also available in a plug-and-play, Microsoft Windows® certified USB version with in-line sound controls for use with PC-based IP telephony.
