

GN SeleCT

- the one-click computer-telephony switch

As Internet, multimedia and telephony technologies converge, various PC-based applications require the right equipment. When using a GN Netcom headset you will discover your IP telephone conversation is as if face-to-face. However, if you use a headset for both your telephone and your computer, you might face a problem if you want to jump from one to the other. The GN SeleCT solves this!

Access between the normal telephone and the computer for applications like VoIP (voice over Internet), speech recognition and other audio solutions is now quite easy. With the SeleCT switch you actually jump between the two with the flick of a button.

The GN SeleCT switch can be used with your GN Netcom headset and your PC. Simple connection and a smart, desk saving design, makes it easy to place the GN SeleCT anywhere at your desk. Without fumbling with cords and connectors – or replacing your current GN Netcom equipment – it has never been easier to switch between the two applications.

The GN SeleCT – your shortcut between telephony and multimedia applications.
