1. In "Security" page, press Up/Down button to choose "Advanced Password" option, press <OK> to enter configuration page;
2. Press Up/Down button, choose and fill in the "Old Password", "New Password" and "Re-enter" blacks.
3. Press <F1> to save the change, and get back to "Security" page.

6.1.8 Call Setting

Configure Call setting by the following steps:

1. In "Setting" page, press Up/Down button to choose "Call Setting" option;
2. Press <OK> to enter configuration page;

6.1.8.1 Speed Dial

Instruction about Speed Dial:

1. Set speed dial for the phone numbers which are called out in frequency, when the speed dial number dialed meets the rule of entry, the corresponding phone number will be sent out.
2. For example, set "1" as the speed dial number of "114", when "1" is dialed, "114" will be sent out.

Configure Speed Dial by the following steps:

1. In "Setting" page, press Up/Down button to choose "Call Setting" option, press <OK> to enter configuration page;
2. Press Up/Down button to choose "Speed Dial" option, press <OK> to enter;
3. Press <F1> to add speed dial number, it will pop up the "Add Dial" frame, enter "Prefix" and "Replace" parameters, and press <F1> or click <OK> to save the changes;
4. In the speed dial list, press Up/Down button to choose the Speed Dial record, press <F2> to edit the record, <F3> to delete the record, <F4> to return to the call setting page.

6.1.8.2 Dial Plan

Instruction about Dial Plan:

1. Set the Dial Plan in the same way of making a long-distance call; if the number dialed matches the entry rules, it will add the configured corresponding numbers in front and dial out automatically.
2. For example, set the "Prefix" as 010, "Replace" as 65, all the number which starts with 65 will be added the prefix 010.

Configure Speed Dial by the following steps:

1. In "Setting" page, press Up/Down button to choose "Call Setting" option, press <OK> to enter configuration page;
2. Press Up/Down button to choose "Dial Plan" option, press <OK> to enter;
3. Press <F1> to add speed dial number, it will pop up the "Add Dial" frame, enter "Prefix" and "Replace" parameters, and press <F1> or click <OK> to save the changes;
4. In the dial plan list, press Up/Down button to choose the dial plan record, press <F2> to edit the record, press <F3> to delete the record, and press <F4> to return to the call setting page.

6.1.8.3 Auto Answer

Configure Auto Answer by the following steps:

1. In "Call Setting" page, press Up/Down button to choose "Auto Answer" option, press <OK> to enter configuration page;
2. Press <OK> to enable/disable auto answer; if auto answer is enabled, users can choose different type. Press <OK> to pop up the pull-down menu, choose the type by pressing Up/Down button, press <OK> to confirm the change.
3. Press <F1> to save and get to the "Setting" page.

Attention:

If the Auto Answer is enabled by the called party, when a new call is coming, the device will auto answer the call after the specific period which is set in the type.

6.1.8.4 Call Waiting

Configure Call Waiting by the following steps:

1. In "Call Setting" page, press Up/Down button to choose "Call Waiting" option, press <OK> to enter configuration page;
 2. Press <OK> to enable/disable Call Waiting function;
 3. Press <F1> to save and get back to the "Call Setting" page.
-

Attention:

If the Call Waiting is enabled by the called party, when a new call is coming in, the device will sound a "Du...", then the LCD indicates the new coming call, the caller will hear the ring back tone.

6.1.8.5 Forward Setting

Configure call forward by the following steps:

1. In "Call Setting" page, press Up/Down button to choose "Forward Setting" option, press <OK> to enter configuration page;
2. Press Up/Down button to choose a forward type: Disable, Always Forward, Busy Forward or No Answer Forward.
3. If you choose "No Answer Forward", you should also set the no answer times.
4. Press <F1> to save and get back to the "Setting" page.

6.2 Advanced Settings

In the Desktop status, press <F3> to get into the "Menu" page, then press <OK> to get into "Setting" page. Press <OK> to pop up the "Admin

Password” frame, enter the password and press <OK> to get into the “Advanced” page, shown as Picture 6.2.

Table 6-2

6.2.1 Account Setting

Configure Account Setting by the following steps:

1. In “Advanced” page, press Up/Down button to choose “Account Setting” option, press <OK> to enter configuration page;
2. Press <OK> to enable line;
3. Press Up/Down to choose and fill in different options.

Attention:

Please contact your ISP for exact information.

6.2.2 WAN (Internet Port)

Configure WAN by the following steps:

1. In “Advanced” page, press Up/Down button to choose “WAN” option, press

<OK> to enter configuration page;

2. Press <OK> to pop up the pull-down menu, press Up/Down button to choose the proper IP assignment type, press <OK> to save the changes.
3. Configure the corresponding parameters according to the different IP assignment methods.
 - Choose "DHCP". Press <F1> to save the changes;
 - Choose "PPPoE", press Up/Down button to configure the corresponding "User Name" and "Password". Press <F1> to save the changes.
 - Choose "Static IP", press Up/Down button to choose and configure "IP Address"~"DNS2", press <F1> to save the changes.

6.2.3 LAN (PC Port)

There are two methods: Bridge and Router.

Configure LAN by the following steps:

1. In "Advanced" page, press Up/Down button to choose "LAN" option, press <OK> to enter configuration page;
2. Press Up/Down button to choose and configure the relating information, press <OK> to save the changes.
3. Press <F1> to save the changes and get back to the previous page.

6.2.4 Servers

Configure Servers by the following steps:

1. In "Advanced" page, press Up/Down button to choose "Servers" option, press <OK> to enter configuration page;
2. Configure the "Info Server", "Business Server", "File Server" and "IPTV Server" options. Please contact your ISP for exact information.
3. Press <F1> to save the changes and get back to the previous page.

6.2.5 Browser

Configure Browser by the following steps:

1. In "Advanced" page, press Up/Down button to choose "Browser" option, press <OK> to enter configuration page;
2. Enter the website address as "Homepage";
3. Press <F1> to save the changes and get back to the previous page.
4. In the "Menu" page choose "Browser", press <OK> to get into the homepage set before.

6.2.6 Call Settings

6.2.6.1 Bandwidth and Frame Rate

Configure Bandwidth by the following steps:

1. In "Call Settings" page, press Up/Down button to choose "Bandwidth and Frame Rate" option, press <OK> to enter configuration page;
2. Press Up/Down button to choose "Bandwidth" option , press <OK> to pop up the pull-down menu, choose the proper bandwidth, press <OK> to confirm the change.
3. Follow the above steps to set the "Frame Rate" option.
4. Press <F1> to save the changes and get back to the previous page.

6.2.6.2 Audio Codes Priority

The device supports 7 kinds of voice codecs, when there are more than one codec chosen, the priorities will be ordered by descending order.

Configure Audio by the following steps:

1. In "Call Settings" page, press Up/Down button to choose "Audio Codes Priority" option, press <OK> to enter configuration page;
2. In the Disable/Enable Codecs List, choose the codecs by Left/Right button, press <OK> to disable/enable the chosen codec.

3. In the Enable Codecs List, press Up/Down button to choose the codec, and then press <F2> and <F3> to make the priority higher or lower respectively.
4. Press <F1> to save the changes and get back to the previous page.

6.2.6.3 Video Codes Priority

VP-2009 supports 3 kinds of video codecs, when there are more than one codec chosen, the priorities will be ordered by descending order.

Configure Video by the following steps:

1. In "Call Settings" page, press Up/Down button to choose "Video Codecs Priority" option, press <OK> to enter configuration page;
2. In the Disable/Enable Codecs List, choose the codecs by Left/Right button, press <OK> to disable/enable the chosen codec.
3. In the Enable Codecs List, press Up/Down button to choose the codec, and then press <F2> and <F3> to make the priority higher or lower respectively.
4. Press <F1> to save the changes and get back to the previous page.

6.2.7 Update Application

VP-2009 supports 3 update methods: manual update, Boot Update and Time update.

Configure Update by the following steps:

1. In "Advanced" page, press Up/Down button to choose "Update Application" option, press <OK> to enter configuration page;
2. Press Up/Down button to choose the proper option, press <OK> to confirm the change.
3. Press Up/Down button to choose and fill in "Update Server".
4. Press <F1> to save the changes, press <F2> to update immediately.

6.2.8 Style Setting

Users can change the color of background and label in the Desktop, Configure the Style Setting by the following steps:

1. In "Advanced" page, press Up/Down button to choose "Style Setting" option, press <OK> to enter configuration page;
2. Configure the RGB parameters, and then press <OK> to confirm the changes, press <ESC> to cancel.
3. Get back to the Desktop to check the changes.

6.2.9 Reset to Factory

Configure Reset to Factory by the following steps:

1. In "Advanced" page, press Up/Down button to choose "Reset to Factory" option, press <OK> to enter configuration page.
2. It will pop up a warning frame asking you whether to reset to factory settings. Click <OK> to confirm the changes, click <ESC> to cancel.

6.2.10 Update Configuration Files

Please check the "6.2.7 Update Application".

7. Configuration

7.1 Log in the Webpage

Configure Reset to Factory by the following steps:

1. Please connect VP-2009 and PC to the same router/switch, or connect PC to VP-2009's PC port. In the VP-2009's Advanced Setting-> LAN, configure LAN port as Bridge mode.
2. Configure PC's IP address assignment method as "DHCP", and restart PC.
3. Open the browser in PC, enter VP-2009's IP address, for example <http://192.168.5.92>, press Enter button, the log in dialog will showed as Picture 7-1.

Picture 7-1

4. Enter user name and password, and press <OK> button.
 - The account can be admin or user.
 - The user name and password of admin are both admin by default.
 - The user name and password of user are both user by default.

7.2 Network Configuration

7.2.1 WAN Configuration

In the webpage, select Network->WAN Port, showed as Picture 7-2.

☒ Obtain an IP Address Automatically

☐ Use the Following IP Address

IP Address: 192.168.0.247

Subnet Mask: 255.255.240.0

Default Gateway: 192.168.0.3

Primary DNS: 202.101.103.55

Secondary DNS: 211.97.104.129

☐ Behind xDSL Modem (PPPoE)

User:

Password:

Confirm Cancel

NOTE

Obtain an IP Address Automatically:
The unit will acquire its IP address from the DHCP server.

Use the Following IP Address:
Configure the IP address, Subnet Mask, Default Router IP address, Primary DNS, Secondary DNS fields by hand.

Behind xDSL Modem (PPPoE):
This setting provide by DSL.

Picture 7-2

Please check Table 7-1 for more information about WAN configuration instruction.

Parameters	Instruction
Obtain an IP Address Automatically	The phone will get the IP address from DHCP Server
Static IP Address (Use the Following IP Address)	The users need to configure the IP address, gateway, submask, DNS, etc.
xDSL(PPPoE)	the users need to configure the user name and password.

Table 7-1 WAN Parameters Instruction

7.2.2 LAN Configuration

In the webpage, select Network->PC port LAN, showed as Picture 7-3

Picture 7-3

Please check Table 7-2 for more information about LAN configuration instruction.

Parameters	Instruction
Bridge	VP-2009 will be used as a switch
Router	VP-2009 will be used as a router
LAN IP Address	Users need to configure the LAN IP address
DHCP Server	the device connect to LAN Port will automatically get the IP address, and the range is between Start IP Address and End IP Address

Table 7-2

Outbound Proxy Server: 192.168.0.138 Port: 5060

NAT Traversal: Disabled

Confirm Cancel

NOTE

Display Name:
SIP service subscribers name which will be used for Caller ID display.

User Name:
User account information, provided by VoIP service provider.

Register Name:
SIP service subscribers Authenticate ID used for authentication.

Picture 7-4

Please check Table 7-3 for more information about Account configuration.

Parameters	Instruction
Display Name	Showed as Caller ID
User Name	Provided by users' SP
Register Name	ID verify when registering
Password	The password for the account
SIP Server	SIP server's IP address or real domain name, provided by ISP.
Port	the port of SIP Server, 5060 by default
Enable Outbound Proxy Server	Please consult SP whether the Outbound Server is enable or not
Outbound Proxy Server	Outbound server's IP address or real domain name, provided by ISP.
Port	the port of Outbound Server, 5060 by default
NAT Traversal	Please consult SP whether the NAT Server is enable or not

Table 7-3

7.3.2 Voice Configuration

In the webpage, select Account->Voice, showed as Picture 7-5.

Picture 7-5

Please check Table 7-4 for more information about Voice configuration.

Parameters	Instruction
Audio Codecs	there are 7 voice codecs, press the Up/Down button to choose the right priority.
Video Codecs	there are 3 video codecs, press the Up/Down button to choose the right priority.
DTMF Type	there are 3 types, and Info DTMF has 3 types.
DTMF Payload	RTP payload of DTMF

Table 7-4

7.3.3 Advanced

In the webpage, select Account->Advanced, showed as Picture 7-6.

The screenshot shows the 'VOIP' configuration interface. The 'Account' tab is selected, and the 'Advanced' sub-tab is active. The configuration table lists various parameters with their current values and units. A 'NOTE' section on the right provides additional information for 'Login Expire', 'RPort', and 'STUN Server'. The 'Confirm' and 'Cancel' buttons are at the bottom.

Parameter	Value	Unit
UDP Keep-alive Message	Disabled	
UDP Keep-alive Interval	30	(seconds)
Login Expire	300	(seconds)
Local SIP Port	9060	
Local RTP Port	11780	
RPort	Enabled	
STUN Server	217.10.79.21	Port 10000
SIP Session Timer T1	0.5	(seconds)
SIP Session Timer T2	4	(seconds)
100 reliable retransmission	Enabled	
Enable precondition	Disabled	
Subscribe Register	Enabled	
Subscribe for MWI	Disabled	
Caller ID Header	FROM	
Use sessiontimer	Disabled	
Sessiontimer	100	(seconds)
Refresher	Uac	
Use user=phone	Enabled	
Voice QoS	Common St	
SIP QoS	Common Server	

NOTE

Login Expire:
This parameter allows user to specify the time frequency that unit refreshes its registration with the specified registrar.

RPort:
The parameter allows SIP phone to tell the proxy to only send responses back to a particular address and port.

STUN Server:
SIP Extension to notify SIP server that the unit is behind the NAT/Firewall.

Picture 7-6

Please check Table 7-5 for more information about Advanced configuration instruction.

Parameters	Instruction
UDP Keep-alive Message	The default mode is Enable
UDP Keep-alive Interval	the time intervals for sending the package to SIP Server, 30 seconds by default
Login Expire	the time intervals of registration , 2000 seconds by default
Local SIP Port	9060 seconds by default
Local RTP Port	11780 seconds by default
RPort	when it is enable, the proxy server is allowed to send back an address and port
STUN Server	Please consult the SP for STUN Server and Port.
Voice QoS	There are 5 options
SIP QoS	There are 5 options

Table 7-5

7.4 Status

Users can enter “Status” page to check the corresponding network and account information. In the webpage, select Status, shown as Picture 7-7.

The screenshot shows the 'Status' page of a VOIP interface. The top navigation bar includes 'Status', 'Account', 'Network', 'Phone', 'Contacts', 'Upgrade', and 'Security'. The 'Status' page is divided into three main sections: Version, Network, and Account. The Version section shows Hardware Version V1.1.2T-Y2008AL02 and Software Version V2.0.38-H20081217. The Network section shows WAN Port Type AutoConfiguration Via DHCP, WAN IP Address 192.168.3.81, Subnet Mask 255.255.240.0, MAC Address 00-15-65-11-25-66, Link Status Connected, LAN IP Address 192.168.7.90, Device Type As an Router, and DHCP Server Status Disabled. The Account section shows name 123, Server 192.168.0.138:5060, and Status Register Fail. A NOTE section on the right provides additional information about the Version, Network, and Account options.

Section	Parameter	Value
Version	Hardware Version	V1.1.2T-Y2008AL02
	Software Version	V2.0.38-H20081217
Network	WAN Port Type	AutoConfiguration Via DHCP
	WAN IP Address	192.168.3.81
	Subnet Mask	255.255.240.0
	MAC Address	00-15-65-11-25-66
	Link Status	Connected
	LAN IP Address	192.168.7.90
	Device Type	As an Router
	DHCP Server Status	Disabled
Account	name	123
	Server	192.168.0.138:5060
	Status	Register Fail

NOTE

Version:
This option shows you the version of firmware.

Network:
This option shows you the information about WAN port and LAN port.

Account:
This option shows you status of the account and some more information.

Picture 7-7

7.5 Phone Configuration

In the webpage, select Phone, showed as Picture 7-8. User can configure the Time parameters in this page.

The screenshot shows the 'Phone' configuration page of a VOIP interface. The top navigation bar includes 'Status', 'Account', 'Network', 'Phone', 'Contacts', 'Upgrade', and 'Security'. The 'Phone' page is divided into three main sections: Preference, Forward, and Speed and Dial Rule. The Preference section shows Language English, Ring Type Asia, Date Format yy/mm/dd, Time Format 12 hours, Time Zone +8 China, Phillip, Time Server cn.pool.ntp.org, and Emergency call. A NOTE section on the right provides additional information about the Time Zone, NTP Server, and Update Interval options.

Section	Parameter	Value
Preference	Language	English
	Ring Type	Asia
	Date Format	yy/mm/dd
	Time Format	12 hours
	Time Zone	+8 China, Phillip
	Time Server	cn.pool.ntp.org
	Emergency call	

NOTE

Time Zone:
Choose the time zone you live in.

NTP Server:
Specify the server that is used to synchronize the time of unit.

Update Interval:
Specify the time frequency that unit refresh the time automatically.

Picture 7-8

7.6 Contact Configuration

In the webpage, select Contact, showed as Picture 7-9. Users can import and export the contact information in Card format.

Picture 7-9

7.7 Upgrade Configuration

In the webpage, select Upgrade, showed as Picture 7-10. Users can upgrade the firmware directly from PC.

Picture 7-10

7.8 Security Configuration

In the webpage, select Security, showed as Picture 7-11.

Note:

When users login the webpage by Admin account, they can change the password of Admin account.

when users login the webpage by User account, they can only change the password of User account.

The screenshot shows the VOIP Security Configuration page. The top navigation bar includes tabs for Status, Account, Network, Phone, Contacts, Upgrade, and Security. The Security tab is active. The main content area has a form for password configuration. The 'User Type' section has two radio buttons: 'user' (selected) and 'admin'. Below this are three input fields: 'Old Password', 'New Password', and 'Confirm Password'. At the bottom of the form are 'Confirm' and 'Cancel' buttons. On the right side, there is a 'NOTE' section with the text: 'Password Type: Select your purview. If you log in as a user, you couldn't change the administrator password.'

Picture 7-11

FAQ

Abnormal phenomena	Potential Reason	Solution
Network Link Status showed as unavailable	the internet cable doesn't plug into the Internet port	Connect the cable according to Picture 4.2.1
	if the WAN port's type is DHCP, the server has been shut down, or there is no available IP address.	Contact with the network administrator
	if the WAN port's type is PPPoE, the user name and password may be wrong	Contact with the SP
Can not make a phone call	fail to register	Confirm the user name and password of the account provided by SP are right
no ringtone when there is an incoming call	the volume is turned off or to the lowest.	Turn up the volume
The volume is very low during the conversation	The volume is too low	Turn up the volume
no voice from handset	Handset isn't connected to the device in the right way	Connect again by following the menu
blank screen	the device is in Sleep status	Press any keys to active the screen
when the AV out mode is TV, there is no video	The voltage is not stable	Replace with a stable power adapter
	Loose of Power plug	Re-plug the power
	Wrong port	Connect to the right port
Others		Restart the device or contact the service hotline
